

Leading the way in specialist printing consumables

## Use

SurePrint high precision doctor blades are manufactured from highly refined strip steel. They provide the ideal choice for Rotogravure, Flexographic and Coating applications. SurePrint blades are finished with an extra smooth edge ensuring a clean wiping action. They are available in a variety of widths, edge configurations and thicknesses to suit individual applications.

## Advantages (over conventional blades)

- S Lasts up to 6 times longer
- S Constant contact area throughout the blade
- S No change in tonal values through blade wear
- S No running in time required
- S No grinding equipment required
- S Fewer replacements mean less downtime

SurePrint Doctor Blade

Conventional Doctor Blade

## Range

### SurePrint Standard

High density carbon steel doctor blades with a refined microstructure. Suitable for standard Rotogravure & Flexographic printing and coating applications using solvent and water based inks.

### SurePrint Plus

High density carbon steel doctor blades with an ultra-refined microstructure. SurePrint Plus gives low friction doctoring with minimum wear and long life.

### SurePrint Stainless

Ultra-refined high quality doctor blades for high corrosion resistance and long running life. Ideal for water based inks with a high PH value.
