

Heidelberg Duct Foils

Leading the way in specialist printing consumables

Use

Duct Foils are an important part of the Heidelberg CPC system, which the majority of Heidelberg presses have been equipped with since the 1980s.

Duct Foils are designed to fit into the CPC system's ink duct tray. The foils act as an intermediate between the ink duct roller and the CAM system, preventing ink from getting into the system.

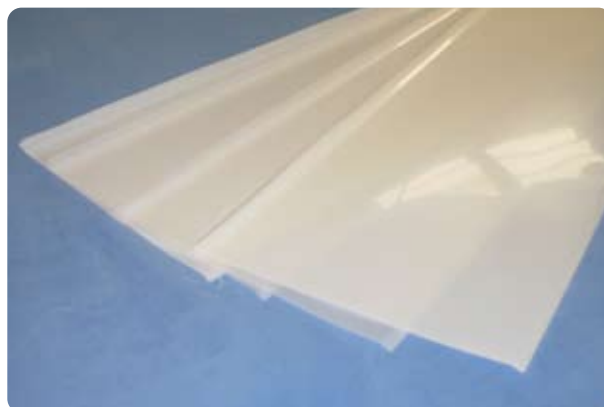

Duct Foils are made to be disposed of after each print run. They are very easy to load and unload from the press.

One of the main advantages to using Duct Foils is the amount of time that can be saved during clean up.

BFS Duct Foils are manufactured to the exact size and specification required to fit straight in to the desired Heidelberg Press.

BFS supply Duct Foils that are suitable for a range of ink types including conventional, UV and hybrid inks.

Available in boxes of 100 pieces.

Available for all CPC equipped Heidelberg presses including:

SM/GTO52, SM52CD, SM72, SM74, SM74CD, SM102, MO, QM, 8 Page Web, 16 Page Web & Harris M1000
