

ADVANTAGES

Practical

- Safe to stock & cut to size
- Lasts longer than conventional paper
- Better mechanical resistance
- Easy to install
- Minimum gauge loss
- Dimensionally stable
- High stability
- Better dot reproduction

Sustainable

- Finito Circle is considered a product of a circular economy, following the three rules of reuse, recycle and reduce.

Main application
Sheetfed/Packaging

FINITO® Circle Blanket underpacking

Based on constant monitoring of the market, and the collection of requests from operators and from the increasing necessity to respect the environment in which we work and live, Finito® Circle has been developed.

Finito® Circle is similar to a classic calibrated paper but contains several technological innovations in-line with the current needs of increasingly advanced and faster printing machines.

Finito® Circle is composed of two layers:

The first layer is made by recycling the waste of TPU raw material used by its manufacturer.

The second layer is paper produced by recovering the waste from fruit production processes.

circle

“ Reuse, recycle and reduce with Finito® Circle ”

- Finito® Circle guarantees stability, mechanical, chemical resistance and the elasticity necessary to attenuate vibrations and improve the transfer of ink on the various normally printed supports, whether these are paper, plastic or metal substrates.
- Finito® Circle is much more resilient than traditional under packing products, lasting several times longer than calibrated paper packings and helping to reduce press downtime.
- Due to its nature, Finito® Circle can be considered a product of a circular economy, following the three rules of reuse, recycle and reduce.
- This perfect combination reduces time and frequency of packing changes and is available cut to size and as a single sheet under-packing or can be combined together to achieve the desired thickness.

DESCRIPTION	One TPU layer and one Paper layer
SURFACE COLOR	Brown/Light Green
TOLERANCE	± 20μ
BOTTOM HARDNESS (Shore A)	
HARDNESS (Shore A)	76
AVAILABLE THICKNESS	0.40 to 1.00mm
ADDITIONAL INFORMATION	
APPLICATIONS	Sheetfed/Packaging
